DEVNET PRODUCT FLOW · OCTOBER 2026

One coin launch.
Many paths to value.

A visual guide from launch promotion to creator fee rewards, migration airdrops, and two distinct buyback and burn programs.

Launch → **Trade & collect** → **Distribute** → **Migrate** → **Buy & burn**

01

CREATOR CHOOSES THE STARTING PACKAGE

Launch a coin and set its growth plan

Every verified launch enters discovery and saves its fee policy. A promotion tier adds a distinct launch campaign.

STANDARD

Start on the map

Verified coin page and directory listing, plus one basic platform X launch announcement when publishing is active.

Launch service: default 0.02 SOL.

PRO · OPTIONAL

Featured launch

One featured platform X launch post with verified Pro status when publishing is active.

Promotion quote: default $150 in $RICH, burned in the launch transaction.

PREMIER · OPTIONAL

Featured + follow-up

One featured post and a separate follow-up eligible at least 24 hours after launch, subject to publisher rules.

Promotion quote: default $300 in $RICH, burned at launch.

Creator benefit: choose visibility and define how the creator-directed 80% is shared among the creator wallet, coin holders, and a named X account.
Community benefit: a launch reserve may earmark 3–50% of the new coin supply for a later migration airdrop.

Paid package prices are admin configurable quotes. Launch posts require a verified creation and an active platform publisher; a paid tier burn does not prove a post was published.

02

ECONOMIC ENGINE

Trades create creator fees; the router allocates them

Pump creator fees collected for each verified mint flow through its V3 router. Collection, creator approval, funding, and final payment are separate steps.

Verified trades → **Per-mint fee collection** → **Creator-signed settlement** → **Funded rewards & payouts**

80%

Creator-directed

The creator’s saved split sends SOL to the creator wallet, eligible coin holders, and a named X account. Holder rewards are automatic after funding and eligibility checks; the named X recipient claims with identity and wallet verification.

8%
Operations & marketing
App services and growth.

1%
Referral network
Qualified three-level uplines.

4%
Daily bonus
Top creators, referrers, traders.

5%
$RICH buyback
Dedicated purchase and burn vault.

2%
AI marketing & coin buybacks
Both buyback agents are included. Promotion packages add X promotion.

Only 8% for app Operations & marketing. The other 92% is allocated to creators and ecosystem benefits. Published allocations do not establish executor readiness or a completed payment. Existing coins keep their saved rates.

All percentages above refer to gross creator fees actually collected, not trade volume or all trading fees. App launch/trade service charges are separate.

03

MIGRATION MILESTONE

New-coin airdrop to eligible $RICH holders

A funded launch reserve and an exact migration-time holder snapshot are prerequisites for any claim.

AT LAUNCH

Reserve new tokens

Creator earmarks 3–50% of the launched coin supply; exact vault custody must be verified.

→

AT MIGRATION

Snapshot $RICH holders

Verified balances at the migration slot set pro-rata eligibility. Later buys do not qualify retroactively.

→

AFTER PROOF

Claim the launched coin

Eligible wallets claim once with a published proof, normally within 90 days; receipt confirms token delivery.

$RICH holder benefit: eligible holders can receive a share of the launched coin. **New project benefit:** distribution reaches an existing holder community.
Claim rule: reserve, snapshot, proof, and token-account delta must all verify.

04

ONGOING TOKEN SUPPORT

Two buyback engines. Two different tokens.

A buyback is counted only after a protected purchase, burn instruction, and finalized supply change.

CURRENT FEE POLICY

Platform $RICH buyback

5% of collected creator fees

Accrues in a dedicated vault. Once the aggregate trigger and market checks pass, the worker buys and burns **$RICH**.

1. Fee claim funds the vault
2. Protected swap buys $RICH
3. BurnChecked reduces $RICH supply

Normal aggregate trigger: 5 SOL. Unspent funds remain pending.

INCLUDED · EXECUTION CONDITIONAL

AI marketing agency for the launched coin

2% agency budget

All three included agents split this dedicated budget equally. Their actions support **the project’s own coin**.

Agent 1 · Awareness: verified platform X promotion, at most once per coin per 24 h; currently paused.

Agent 2 · $100k: one own-coin buyback and burn at verified USD market cap ≥ $100,000.

Agent 3 · $300k: one own-coin buyback and burn at verified USD market cap ≥ $300,000.

Normal agency launches and execution acceptance remain gated; a selected agent or market-cap reading is not a completed action.

WHO BENEFITS, AND WHEN

A stakeholder view across the full journey

Benefits are opportunities governed by each coin’s saved policy, eligibility, funding, and verified receipts.

Coin creator · launch → fees
Choose promotion, reach discovery, and direct 80% of collected creator fees to the chosen recipient mix.

Coin holders · trading → rewards
Receive eligible SOL holder rewards after the funded payout cycle and verified sampling.

Named X account · fees → claim
Claim its saved SOL share after identity, wallet, and funding checks.

Referrers · fee settlement
Qualified uplines receive the saved referral allocation; direct referrers can also compete in Daily bonus.

Creators, referrers, traders · daily
Each category can compete for a separate top-three SOL bonus pool from completed, funded days.

$RICH holders · migration
Eligible snapshot holders can claim the new coin’s reserved tokens with proof.

New-coin community · milestones
Every new token includes both own-coin buyback agents. Promotion packages add X promotion. Actions require verified funding and saved milestones.

$RICH ecosystem · launch & fees
Paid-tier burns and the separate 5% fee-funded buyback can reduce $RICH supply when confirmed.

Platform · ongoing
Receives its operations allocation and separate disclosed service charges to support the product.

Read the flow as a policy map. This is a Devnet product infographic, not proof that any specific launch, X post, airdrop, payout, agency action, or burn executed. The fee policy saved at each launch governs that coin. Sources: launch packages · creator fees · migration airdrop · agency policy · $RICH buyback.
